Abstracts

According to our (Global Info Research) latest study, the global CNC Continuous Generating Gear Grinding Machines market size was valued at US\$ 529 million in 2025 and is forecast to a readjusted size of US\$ 729 million by 2032 with a CAGR of 5.1% during review period.

In 2025, global sales of CNC Continuous Generating Gear Grinding Machines reached approximately 620 units, with an average market price of about USD 830000 unit, an annual production capacity of roughly 650 units, and an industry-average gross margin of approximately 35%.

CNC Continuous Generating Gear Grinding Machines, also referred to as threaded-wheel gear grinding machines, are high-precision CNC machine tools designed for the hard finishing of gears after heat treatment. The core process uses a threaded grinding wheel, or grinding worm, synchronized with the workpiece spindle to generate the final tooth flank geometry of external gears, selected internal gears, shaft gears, disc gears and gear shafts. A typical machine integrates a rigid machine bed, grinding spindle, workpiece spindle, multi-axis CNC control, dressing system, automatic indexing and alignment, coolant filtration, measurement and compensation software, and optional loading automation. These machines are primarily used in the production of automotive transmission gears, electric-drive gears, robot reducer gears, precision planetary gears, industrial gearbox gears, construction machinery gears and aerospace transmission components. Their value lies in stable high-volume production, high tooth accuracy, improved flank surface quality, optimized flank modification, reduced transmission noise and enhanced load-carrying performance.
