Scope of the Report

This report focuses on the CNC Controller in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

3-axis CNC machines are projected to account for the largest share of the global controller market during the forecast period. The implementation of these machines in the manufacturing of parts improves speed and accuracy of the production process. However, the market for controllers in 5-axis CNC machines is expected to witness higher growth between 2017 and 2023. Controllers are used in 5-axis CNC machines for manufacturing complex machine parts in critical industries such as aerospace and defense. They enable the manufacturing of critical aircraft components more accurately. CNC machining center is expected to hold the largest share of the overall controller market in 2017. They are used for a wide range of applications. Machining processes such as milling, drilling, tapping, and boring, which were traditionally done on conventional machine tools, can be done more efficiently with the help of CNC machining centers. Further, it help in continuous production work, owing to which they hold a major share of the overall controller market.

The worldwide market for CNC Controller is expected to grow at a CAGR of roughly 13.0% over the next five years, will reach 11100 million US\$ in 2023, from 5320 million US\$ in 2017, according to a new GIR (Global Info Research) study.
