According to our (Global Info Research) latest study, the global CNC Cylindrical Grinding Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The CNC cylindrical grinding machine is designed especially to shape the external surfaces of workpieces with unmatched precision. In a pre-programmed operation on a computer, the CNC system instructs the grinder to do the desired action through a series of instructions to control a wide variety of sophisticated machinery. Several metalworking businesses use cylindrical grinding equipment to finish the outer or interior diameter of a cylindrical product. These adaptable machines can work on objects of varying sizes, shapes, and diameters if the object has a central axis of rotation.
