CNC EDM (Electrical Discharge Machining) machine tools are precision manufacturing devices that use electrical discharges (sparks) to remove material from electrically conductive workpieces, typically metals. Controlled by a computer numerical control (CNC) system, these machines can create complex shapes and fine details that are difficult or impossible to achieve with traditional cutting tools. EDM machines come in two main types: wire EDM, which uses a thin wire to cut through material, and die-sinking EDM, which uses a shaped electrode. They are widely used in tool and die making, aerospace, automotive, and medical industries for producing molds, dies, and high-precision components.
