According to our (Global Info Research) latest study, the global CNC Fully Hydraulic Die Forging Hammer market size was valued at US\$ 167 million in 2025 and is forecast to a readjusted size of US\$ 226 million by 2032 with a CAGR of 4.4% during review period.

In 2025, the global sales volume of CNC Fully Hydraulic Die Forging Hammer was approximately 280 units, with the mainstream enterprise-level average price at around USD 580,000 per unit and the gross margin of major manufacturers at approximately 25%?38%.

CNC Fully Hydraulic Die Forging Hammer is a high-end forging equipment used for metal closed-die forging. It uses a hydraulic system to drive the hammer head for lifting, acceleration, striking, and return movement, while the CNC system precisely controls impact energy, stroke, frequency, production rhythm, and process parameters. Compared with ordinary electro-hydraulic hammer or air hammer, CNC Fully Hydraulic Die Forging Hammer features adjustable impact energy, high repeatability, stable operation, lower energy consumption, and strong adaptability to automation. It is suitable for die-forged part production in automotive component, construction machinery, rail transit, aerospace, and other fields, especially for mass-production, precision, and automated forging scenarios.

The upstream of CNC Fully Hydraulic Die Forging Hammer mainly includes frame structural part, hydraulic cylinder, hydraulic pump station, accumulator, servo valve, motor, sensor, CNC system, PLC control system, die, and wear-resistant guiding component. Among them, the hydraulic control system, hammer body rigidity, and CNC control accuracy directly affect striking stability, forming precision, and service life. The

downstream market mainly serves die forging enterprises and industries such as automotive manufacturing, construction machinery, aerospace, and rail transit. The equipment is usually integrated with heating furnace, charging and discharging machine, robot, graphite lubrication system, and automated conveying system to form an automated forging production line. As the forging industry upgrades toward energy saving, labor reduction, and high consistency production, the application value of CNC Fully Hydraulic Die Forging Hammer in medium- and high-end die forging equipment continues to increase.
