The CNC linear guide grinder is a specialized equipment used for grinding and trimming the linear guide of CNC machine tools. It is widely used in the field of machine tool manufacturing and has become an indispensable component in machining. The grinder is equipped with three grinding heads, which can simultaneously grind the reference surfaces, raceway surfaces, and installation bottom surfaces of the linear guide rail on both sides, achieving one-time clamping to complete the grinding of the above surfaces of the guide rail, effectively ensuring the straightness of the linear guide rail in both the vertical and horizontal directions. Through precise diamond roller dressing, the shape accuracy of the grinding wheel dressing is effectively ensured, and the accuracy consistency of the linear guide rail is guaranteed. The guide rail accuracy meets the precision requirements of UP level guide rail pairs, and can achieve simultaneous processing of two guide rails in one clamping. Widely used in various fields such as industrial mother machine manufacturing, robot manufacturing, automobile manufacturing, precision instrument manufacturing, aerospace, engineering machinery, etc.
