According to our (Global Info Research) latest study, the global CNC Micro-hole EDM Machines market size was valued at US\$ 255 million in 2025 and is forecast to a readjusted size of US\$ 386 million by 2032 with a CAGR of 6.1% during review period.

In 2025, global sales of CNC Micro-hole EDM Machines reached approximately 2,600?3,100 units, with an average market price of about USD 80,000?100,000 unit, an annual production capacity of roughly 3,000?3,500 units, and an industry-average gross margin of approximately 45%.

CNC Micro-hole EDM Machines are specialized electrical discharge machining systems designed for producing micro-holes, small holes, deep small holes, start holes and complex-angle holes in electrically conductive materials. These machines remove material through controlled pulsed electrical discharges between an electrode and the workpiece, enabling non-contact machining of hard, high-strength, high-melting-point or difficult-to-cut conductive materials. A typical system consists of a pulse power supply, CNC controller, precision motion axes, rotating spindle, tubular or fine-wire electrodes, high-pressure flushing and filtration units, automatic electrode handling, process databases and machine protection systems. The equipment is commonly used for hole diameters ranging from the micrometer scale to several millimeters, with applications in turbine blade cooling holes, wire EDM start holes, fuel injector holes, spinneret holes, mold threading holes, medical micro-features, precision electronic test components and hard-material parts.
