## Abstracts

The global CNC Plasma Table market size is expected to reach \$ 1215 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

A CNC Plasma Table is a computer numerically controlled automated metal cutting machine integrated with a rigid worktable, plasma power supply, servo drive system, and precision motion mechanism; it uses high-temperature plasma arc to cut carbon steel, stainless steel, aluminum and other metal sheets and profiles, delivering high-precision, fast and automatic contour cutting widely adopted in metal fabrication, steel structure, machinery and hardware processing industries.

In 2025, global CNC Plasma Table production reached approximately 53,939 units, with an average global market price of around US\$ 16,500 per unit.

The upstream supply chain covers raw materials and core components including steel plate for machine frames, CNC control systems, plasma power sources, servo motors, linear guides, drive parts, electrical accessories and cutting consumables; midstream consists of manufacturers that conduct mechanical processing, assembly, system debugging and performance calibration to complete finished machines; downstream includes end users such as steel structure factories, sheet metal workshops, engineering machinery manufacturers and metal processing enterprises, supported by distributors, export traders and after-sales service providers as circulation and service links.

The cost structure of a CNC Plasma Table is mainly composed of core electrical and control components accounting for the largest proportion, followed by raw material costs for machine frame and table structure, mechanical transmission and fitting expenses,

labor costs for assembly, wiring and debugging, plus minor costs covering software setting, factory calibration, packaging, logistics, quality inspection and after-sales reserve expenses.

This report studies the global CNC Plasma Table production, demand, key manufacturers, and key regions.
