CNC Prototyping Service is a service model that uses computer numerical control programming technology to command CNC machine tools to accurately process materials through pre-written programs, thereby producing samples or prototypes similar to the final product. It uses CAD/CAM software to convert design drawings into mechanical language executable by machine tools to achieve high-precision, automated production. It is often used to quickly manufacture prototypes of automotive parts, mold parts and other products. It has the characteristics of high processing accuracy, high production efficiency and strong flexibility. It can process a variety of materials such as metals and engineering plastics, and supports a variety of processes such as milling, turning, and EDM, meeting the personalized needs of design verification, functional testing and user feedback in product development.
