Abstracts

According to our (Global Info Research) latest study, the global CNC Slow Wire EDM Machines market size was valued at US\$ 1276 million in 2025 and is forecast to a readjusted size of US\$ 1825 million by 2032 with a CAGR of 5.2% during review period.

In 2025, global sales of CNC Slow Wire EDM Machine reached approximately 10,100?10,600 units, with an average market price of about USD 115000?123000 unit, an annual production capacity of roughly 12,000?15,000 units, and an industry-average gross margin of approximately 40%.

A CNC Slow Wire EDM Machine, under the low-speed or single-pass wire category commonly referred to as a slow wire EDM machine in the Chinese market, is a precision electrical discharge machining system that removes material from electrically conductive workpieces by generating controlled spark discharges between a continuously fed metallic wire electrode and the workpiece. The machine is typically configured with CNC contour control, brass or copper wire feeding, deionized-water or oil dielectric systems, automatic wire threading, precision servo drives, linear scales or closed-loop motion control, multi-pass finishing, taper cutting, and corner control functions. This study focuses on complete low-speed wire EDM machine tools used for high-accuracy profile cutting rather than broad EDM equipment. Typical product forms include standard water-based wire EDM machines, submerged cutting models, oil-dielectric ultra-precision models, fine-wire or micro-wire EDM systems, large-travel and heavy-workpiece machines, and automated wire EDM cells. Major applications include precision molds and dies, stamping tools, extrusion dies, carbide components, aerospace parts, medical devices, electronic connector tooling, semiconductor packaging tooling, automotive precision parts, and other conductive-material

components requiring tight tolerance and complex geometry.
