The global CNC Swing Shearing Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

CNC swing shearing machine is a shearing machine controlled by a CNC system. It adopts a pendulum structure and completes cutting of metal sheets through up and down shearing movements. The CNC swing shearing machine has the characteristics of high precision, high efficiency, and good stability, and can accurately cut metal sheets of different sizes and thicknesses. Through the programming of CNC systems, automated operations can be realized and production efficiency can be improved. CNC swing shearing machines are widely used in metal processing industries, such as machinery manufacturing, automobile manufacturing, shipbuilding and other fields. Compared with the CNC gate shearing machine, the CNC swing shearing machine may have different cutting speed and cutting accuracy, and the specific performance and characteristics will vary according to different machine models and manufacturers.
