Abstracts

The global CNC Tool Grinders market size is expected to reach \$ 1694.6 million by 2029, rising at a market growth of 6.0% CAGR during the forecast period (2023-2029).

With the development of modern manufacturing technology, the demand for high-precision shaped complex tools and complex precision parts is increasing, and ordinary tool grinders and traditional machining processes are no longer able to meet the requirements of precision and composite molding. In order to solve these problems, grinding machines have gradually evolved from the mechanical structure of the transmission fit to the application of today's multi-axis interpolation CNC technology.

The processing principle and mathematical model of CNC tool grinders are very different from those of traditional tool grinding machines, and the CNC grinding system can realize interpolation functions such as linear interpolation, circular interpolation, involute interpolation, exponential function interpolation, and spiral interpolation, thus solving the efficient processing of complex-shaped tools and complex special parts.

The global major manufacturers of CNC tool grinders are ANCA, WALTER, VOLLMER WERKE Maschinenfabrik, Star Cutter, Rollomatic, Alfred H. Schütte, Makino Seiki, etc. The top five manufacturers occupy more than 50% of the market share, with the largest being ANCA. Global CNC tool grinders production regions are mainly located in North America, Europe, Japan, China, etc., with the top two regions accounting for more than 50% of the market share. In terms of product categories, 5-axis CNC tool grinders have a higher market share of 69.39%, followed by 4-axis with a 20.14% share. The automotive industry, aerospace and defense, electronics and medical industries are its main application areas, with the aerospace and defense sector accounting for the largest market share, at 26.45%.
