The global CNC Universal Cylindrical Grinder market size is expected to reach \$ 1243 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

CNC Universal Cylindrical Grinder integrates computer numerical control technology to automate grinding movements by executing pre-programmed instructions, eliminating the need for manual operation control and significantly reducing labor intensity. This equipment features a high degree of generalization and modularity, utilizing servo motors and ball screws to drive the table and wheelhead, thereby ensuring high rigidity, stability, and precise positioning accuracy during complex grinding tasks. It possesses versatile processing capabilities, allowing for the simultaneous grinding of cylindrical, conical outer surfaces, and inner holes through specific attachments, and supports both reciprocating and plunge grinding methods to accommodate diverse workpiece geometries. Furthermore, the machine optimizes production efficiency by adapting to both single-piece and batch manufacturing requirements, delivering consistent high-quality surface finishes and geometric precision through automated cycles. In 2025, global CNC Universal Cylindrical Grinder production reached approximately 4523 units with an average global market price of around k US\$200 per unit.

The future development trends of CNC Universal Cylindrical Grinder will closely revolve around intelligence and automation upgrades. Enterprises will significantly improve production efficiency and reduce labor costs by integrating robot systems to achieve automatic workpiece loading and unloading and online detection. By using artificial intelligence algorithms to optimize grinding parameters, the equipment can meet the stringent requirements of high-end manufacturing for part quality and production cycles, thereby enhancing corporate profitability. Major industry trends include the continuous

increase in numerical control rates. With the transformation and upgrading of downstream industries, the market supply structure will shift towards mid-to-high-end grinders, and enterprises will reduce the supply of low-end products to increase product added value. At the same time, the improvement of self-sufficiency in core components will become critical. Enterprises will dedicate themselves to increasing the localization rate of key components such as numerical control systems and spindles, reducing dependence on international brands to lower production costs and enhance market competitiveness. Furthermore, with the recovery of the global economy and the increase in market share in the Asian region, enterprises will further expand into overseas markets to optimize revenue structures and enhance anti-risk capabilities.
