According to our (Global Info Research) latest study, the global CNG Gas Volume Indicator market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A CNG gas volume indicator, also known as a CNG flow meter or CNG fuel dispenser, is a device used to measure and display the quantity or volume of compressed natural gas (CNG) being dispensed or consumed. CNG gas volume indicators are commonly used in CNG fueling stations, where vehicles equipped to run on natural gas can refill their tanks. The indicators typically consist of a flow sensor or meter that measures the flow rate of the CNG, along with a display unit that shows the volume of gas being dispensed. They may also include additional features such as pressure and temperature sensors to provide more comprehensive monitoring of the CNG system. The primary purpose of a CNG gas volume indicator is to ensure accurate billing and control of CNG fuel consumption. They are essential for managing CNG inventory, tracking fuel usage, and maintaining efficient operation of CNG fueling stations or other applications where CNG is dispensed.
