Abstracts

The global CNG Powertrain market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A CNG powertrain is identical to a conventional internal combustion engine powered by gasoline. There are a few new components in the CNG powertrain, but the combustion process is identical. The fuel is combined with air before being burned in the cylinder to generate power. CNG necessitated a tank that could carry highly pressurized gas, unlike conventional fuel tanks.
