Co-Extrusion Blown Film Machines are industrial machines used to produce multi-layer plastic films by simultaneously extruding multiple materials and combining them into one single film. The process, called co-extrusion, allows different polymers or resins with distinct properties to be layered together, resulting in films with enhanced functionality compared to single-layer films. These machines are widely used in industries such as packaging, agriculture, and medical applications, where specialized films are needed for moisture resistance, strength, flexibility, and barrier properties.
