Abstracts

According to our (Global Info Research) latest study, the global Co-packaged Optical (CPO) Modules market size was valued at US\$ 45.9 million in 2024 and is forecast to a readjusted size of USD 947 million by 2031 with a CAGR of 41.9% during review period.

A Co-Packaged Optical (CPO) Module is an advanced optical interconnect technology that integrates optical engines directly alongside the switching ASICs or processors inside a single package. It brings the optics closer to the source of data to reduce power consumption, improve performance, and overcome bandwidth and thermal limitations of traditional pluggable transceivers.

The AI revolution is a recurring theme across industries, with projections of the AI sector reaching \$280 billion by 2030. CPO technology, which integrates optical engines with compute chips (e.g., AI/ML accelerators), could benefit from AI-driven demand for high-speed, low-latency data transmission in data centers and HPC clusters.

Tech giants like Google, Amazon, Microsoft, and Meta are exploring CPO to enhance power efficiency and data transmission speeds. CPO is expected to replace traditional pluggable optics in data center switches by 2026–2028.

Traditional pluggable optics consume 50-60% more power than CPO. CPO enables energy-efficient data transmission, reducing cooling costs in data centers. Growing focus on green data centers and carbon footprint reduction is accelerating CPO deployment.

Industry alliances like OIF (Optical Internetworking Forum) and Open Compute Project

(OCP) are working on CPO specifications. Companies like Cisco, Intel, Broadcom, etc. are collaborating to develop standardized CPO modules for commercial deployment.
