According to our (Global Info Research) latest study, the global CO2 Absorbers market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

CO2 absorbers are critical components used in anesthesia and respiratory systems to remove carbon dioxide (CO2) from exhaled gases. These devices typically contain a chemical substance, such as sodium hydroxide or calcium hydroxide, housed in a canister or cartridge within the anesthesia machine. As exhaled gases pass through the CO2 absorber, the chemical reaction with CO2 neutralizes and captures the gas, preventing it from being re-inhaled by the patient. This process helps maintain a safe and effective level of anesthetic gases and ensures the patient breathes in a clean and oxygen-rich mixture. By continuously removing CO2, absorbers contribute to maintaining proper acid-base balance in the patient's blood and enhance the overall efficiency and safety of anesthesia delivery during surgical procedures.
