CO2 adsorbers are devices or systems designed to capture and remove carbon dioxide from gas streams. They are used in a variety of applications, including industrial processes, air purification, and environmental control, to reduce CO2 emissions and maintain air quality. The technology behind CO2 adsorbers typically involves the use of adsorbents that have an affinity for CO2 molecules, allowing them to be selectively captured from a mixture of gases. CO2 adsorbers are an important component in the effort to reduce greenhouse gas emissions and combat climate change. They are also crucial in maintaining air quality in closed environments and in purifying gases for various industrial applications. The design and operation of CO2 adsorbers can vary depending on the specific requirements of the application and the characteristics of the gas stream being treated.
