## Abstracts

According to our (Global Info Research) latest study, the global CO2 Gas Shielded Welding Machine market size was valued at US\$ 589 million in 2025 and is forecast to a readjusted size of US\$ 779 million by 2032 with a CAGR of 4.1% during review period.

CO2 Gas Shielded Welding Machine is a type of gas metal arc welding equipment that uses carbon dioxide gas as a shielding medium. It uses an automatic wire feeder to feed the welding wire, and utilizes an electric arc to melt the wire and the workpiece. The gas shielding protects the molten pool from oxidation. It is widely used in the welding of low-carbon steel and low-alloy steel structures, automobile manufacturing, and pipeline welding, and is characterized by high efficiency, low cost, and minimal deformation.

The upstream segment primarily involves core electronic components and basic mechanical parts. Key core components include inverter power devices, control chips, main transformers, and reactors.

Product prices depend on factors such as functionality, brand, and procurement channels, with a market price of approximately \$1000-2000 per unit. Global sales are projected to reach nearly 400,000 units in 2025, with industry gross profit margins ranging from 25% to 40%.

In terms of driving factors, the automation and intelligent transformation of the manufacturing industry is the core engine. The explosive growth of industrial robot integrated welding units demands extremely high communication response speed and

arc stability from gas-shielded welding machines, which in turn drives the increased demand for fully digital communication-type welding machines.

At the same time, continuous investment in infrastructure construction (such as bridges and prefabricated buildings) and the lightweighting requirements of new energy vehicles are prompting the development of pulsed and multi-functional gas-shielded welding machines to address the welding challenges of new materials such as aluminum alloys and high-strength steel.
