CO2 laser integrated laser engraving machine is a device that uses the laser beam emitted by a carbon dioxide laser to engrave, cut and mark. Its laser wavelength is usually 10.6 microns, which can effectively act on non-metallic materials (such as wood, plastic, leather, glass, paper, etc.) and some light metal materials. Through high-precision laser control, CO2 laser engraving machine can perform detailed pattern engraving, text marking, cutting and punching on the surface of objects. It is widely used in industrial manufacturing, advertising logos, personalized customization, electronic product marking and other fields. Its advantages include non-contact processing, high precision, no pollution and fast processing speed.
