According to our (Global Info Research) latest study, the global CO2 Logger market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A CO2 logger is a device used to measure and record changes in CO2 concentration in the environment over time.

The values ??measured by the CO2 logger can be checked on the display of the device itself. However, changes in the values ??over time are recorded as data in the device and can be output for analysis.

In the past, the main method was to record data to a recording medium in the device itself and retrieve it. However, in recent times, there are also models available in the market that allow remote monitoring of values using technologies like Bluetooth, Wi-Fi, and others.
