A CO₂ Recovery Unit for Industry is an advanced technology designed to capture and purify carbon dioxide from industrial emissions, biogas plants, or fermentation processes. These systems typically use methods like chemical absorption, cryogenic distillation, or membrane separation to isolate CO₂ from other gases. The recovered CO₂ can be reused in applications such as carbonated beverages, enhanced oil recovery, or as a feedstock for chemical production, reducing waste and lowering environmental impact. By integrating CO₂ recovery systems, industries can enhance sustainability, improve energy efficiency, and contribute to reducing greenhouse gas emissions.
