The global CO2 Transcritical Semihermetic Compressor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A CO2 transcritical semi-hermetic compressor is a type of compressor specifically designed for CO2 (carbon dioxide) transcritical refrigeration systems. This compressor is semi-hermetic, meaning that its motor and compressor components are housed in a sealed housing, but the compressor can be opened for maintenance and repair purposes.

CO2 transcritical semi-hermetic compressors are commonly used in commercial and industrial refrigeration applications, such as supermarkets, food processing plants, cold storage warehouses, and HVAC systems. They play a crucial role in compressing CO2 refrigerant to high pressures and temperatures necessary for proper heat transfer and cooling in transcritical refrigeration cycles.

This report studies the global CO2 Transcritical Semihermetic Compressor production, demand, key manufacturers, and key regions.
