Abstracts

A coagulation analyzer or a micro-coagulation system is a device that measures and evaluates the speed of clot formation or blood coagulation. It helps to avoid the chances of heart attack, thrombosis, and embolism by detecting the presence of blood clots in the blood vessels. Scope of the Report:

This report focuses on the Coagulation Analyzers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

This analyzer is used to measure a coagulation pathway speed as well as thrombin & thromboplastin levels in a few minutes. It works on the principle of optical detection method by detecting turbidity during coagulation of the blood causing change in the intensity of light that it scattered.

A micro coagulation system has built-in quality control and security lockout protocols to ensure safe and secure use, as it is used on sensitive information about patients health. The worldwide market for Coagulation Analyzers is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
