Abstracts

Coagulation Device provide measurement of blood platelet levels in a fast and simple process. A coagulation test could provide diagnostic prevention from potentially heart attack-inducing blood clots. A coagulation instrument can be used to measure a coagulation pathway speed, as well as thrombolin and thromboplastin levels in as low as a few minutes. A coagulation instrument is specifically designed to handle a large number of patients, permitting the storage up to 600 patient tests per well. To expedite assay completion and proper identifications, these microcoagulation systems employ cuvettes that are bar-coded, obviating the need to separately encode each test sample. With the sensitive nature of patient health information, a microcoagulation system comes with built-in quality control and security lockout protocols to ensure safe and secure use.
