## Abstracts

According to our (Global Info Research) latest study, the global Coagulation Factor VIIa market size was valued at USD 1214.1 million in 2023 and is forecast to a readjusted size of USD 1548.9 million by 2030 with a CAGR of 3.5% during review period.

Recombinant activated factor VII (rFVIIa) binds to exposed tissue factor at the place of tissue and vascular injury. Thrombin generated by this process activates platelets and the coagulation cascade.

Due to the COVID-19 pandemic, the global Recombinant Human Coagulation VIIa market size is estimated to be worth US\$ 1180 million in 2022 and is forecast to a readjusted size of US\$ 1467 million by 2028 with a CAGR of 3.7% during the forecast period 2022-2028. Market driver is mainly rising number of hemophilia patients across the world. Recombinant coagulation factors, as opposed to plasma-derived counterparts, consume a very low risk for transfer of infectious diseases and their use would eliminate the risk of infection from viruses such as the human immunodeficiency virus and hepatitis C. The advancement of recombinant coagulation factors has been a major importance in hemophilia care promising nearly complete safety of individuals from the risk of transmitted infections.
