Abstracts

Globally, the hematology market is assessed as a mature market and is characterized by intense competition with a high demand for clinical coagulation tests. With the increase in the number of cardiovascular surgical procedures being performed, there has been a considerable need for coagulation testing. Today, an increasing number of patients are using anticoagulants after having a mechanical heart valve implantation performed, as well as to prevent coagulation accidents like pulmonary embolisms, deep venous thrombosis, strokes, and myocardial infarctions. With increasing pressure on clinicians to normalize anticoagulation therapy, continuous monitoring of coagulation factors has become a primary protocol, thus driving the market for coagulation.
