## Abstracts

According to our (Global Info Research) latest study, the global Coal Mine Bolter Miner market size was valued at US\$ 858 million in 2025 and is forecast to a readjusted size of US\$ 1692 million by 2032 with a CAGR of 10.2% during review period.

In 2025, global Coal Mine Bolter Miner production reached approximately 556 units, with an average global market price of around US\$1.5 million per unit.

A coal mine bolter miner is an integrated piece of equipment that combines roadway excavation, rock bolting support, loading, and conveying functions. It is widely used in underground coal mine roadway development. The machine cuts coal or rock using a cutting unit while simultaneously installing roof and rib bolts for support, enabling continuous ?cutting?supporting?loading? operations. This significantly improves efficiency and safety, making it a key piece of equipment in modern intelligent mining.

The upstream of the bolter miner industry includes suppliers of key components such as high-strength steel, hydraulic systems, motors and drives, control systems (PLC/automation), gearboxes, and sensors. The midstream consists of equipment manufacturers responsible for design, integration, and production. Downstream applications are mainly coal mining companies and mining contractors, focusing on underground roadway development and intelligent mining projects. Representative upstream suppliers include Baosteel (steel), Siemens (electrical and automation), Bosch Rexroth (hydraulics), and SKF (bearings). Key downstream users include major mining companies such as China Energy Investment Corporation, China Coal Energy, and Yankuang Energy.
