Abstracts

The global Coal-Spec Toilets market size is expected to reach \$ 384 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Coal-Spec Toilets are portable or fixed sanitary facilities specifically designed for underground coal mines or coal mining work areas. They are characterized by explosion-proof, fire-proof, corrosion-resistant, and highly airtight features, adapting to harsh environments such as high humidity, high dust, and low light. Their structure is typically made of corrosion-resistant steel plates or fiberglass, and the interior is equipped with a vacuum suction system, waterless flushing device, deodorization system, lighting equipment, and ventilation system. In high-risk environments such as coal mines, ordinary toilets are ill-suited to the conditions of high temperature, high humidity, high dust, and poor ventilation. Coal-Spec Toilets, through their explosion-proof design and high airtightness, effectively ensure the safety and hygiene of miners when using the toilet, improving the quality of the working environment. The average price of this product is approximately US\$2,000 per set, with global sales of approximately 133,000 sets.

This report studies the global Coal-Spec Toilets production, demand, key manufacturers, and key regions.
