Abstracts

Coated rubber stopper refer to rubber stopper products that are partially covered with a firm layer on the contact surface between the rubber stopper and the drug, such as fluorine-coated film rubber stoppers. The film-coated rubber stopper adds a barrier plastic film on the surface of the rubber stopper to shield the contact between the rubber stopper and the drug, which can effectively reduce the absorption, leaching, and penetration between the rubber stopper and the drug, thereby effectively reducing or delaying the contact between the rubber stopper and the drug. The occurrence and development of capacitive problems can improve the long-term stability of drugs.
