Abstracts

According to our (Global Info Research) latest study, the global Coated Modified Separator market size was valued at US\$ 4122 million in 2024 and is forecast to a readjusted size of USD 12580 million by 2031 with a CAGR of 17.5% during review period.

Li-ion Battery Separator is a kind of microporous film which main matrix is polyolefine film, it has manufactured by one-step or two-step stretching in hole craft and had ion pass-through function, in the li-ion battery it has played a role of separate positive pole and negative pole of battery to avoid short circuit. Following the development of technology of separator there has gradually derived some new types of li-ion battery separator, such as PP/PE/PP compound separator, ceramic coating separator resistance to high temperature and PVDF coating separator with high performance.

Lithium Battery Ceramic Separator is based on dry, wet and non-woven fabrics, and is coated with inorganic ceramic particle layers (such as high-purity alumina, boehmite, SiO₂, etc.) to prepare composite multi-layer separators. , The ceramic composite separator realizes the performance complementarity between materials, which can meet the needs of new lithium-ion batteries with high safety and high-power rapid charge and discharge.

The increasing adoption of electric vehicles has been a significant driver for the coated modified separator market. EV manufacturers are seeking battery technologies with improved safety, longer battery life, and higher energy density. Coated modified separators play a vital role in meeting these requirements by providing enhanced safety features and optimizing the electrochemical performance of lithium-ion batteries used in

EVs.

Safety is a crucial concern in battery technologies, especially in applications where high-energy density and fast charging are required. Coated modified separators are designed to enhance safety and thermal stability in lithium-ion batteries. These coatings can provide increased resistance to thermal runaway and prevent the propagation of thermal events, reducing the risk of battery failure and ensuring safer battery operation.
