According to our (Global Info Research) latest study, the global Coating Film Dryer market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A Coating Film Dryer is a machine used to remove the solvent or water from a coating film, leaving behind a dry and solid coating. This machine works by applying heat (and sometimes also blowing air) to the coated surface, which accelerates the evaporation of the solvent or water from the coating film. Coating film dryers are commonly used in a variety of industries, including printing, electronics, automotive, and packaging. In the printing industry, for example, coating film dryers are used to dry the ink on printed paper or other materials. In the electronics industry, coating film dryers are used to dry the films used in circuit board manufacturing. In the automotive industry, coating film dryers are used to dry the paint on car bodies. There are different types of coating film dryers, including infrared dryers, convection dryers, and combination dryers that use both infrared and convection drying. The type of coating film dryer used depends on the specific requirements of the application and the characteristics of the coating material. Some coating film dryers are also equipped with features such as adjustable temperature and drying time settings, variable speed controls, and automated controls for increased efficiency and consistency.
