According to our (Global Info Research) latest study, the global Coaxial Valve market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Coaxial valve is a common type of valve, and its working principle is to control the flow of medium by rotating the valve core. The coaxial valve is composed of valve body, valve cover, valve core, sealing ring and other components, among which the valve core is the key component, which controls the flow of the medium through rotation. The spool of a coaxial valve consists of two cylindrical parts, an inner cylindrical part and an outer cylindrical part. The inner cylindrical part is called the spool shaft and the outer cylindrical part is called the spool sleeve. There is a gap between the spool shaft and the spool sleeve, through which the medium flows.
