Abstracts

The global Coaxial Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Coaxial valve is a common type of valve, and its working principle is to control the flow of medium by rotating the valve core. The coaxial valve is composed of valve body, valve cover, valve core, sealing ring and other components, among which the valve core is the key component, which controls the flow of the medium through rotation. The spool of a coaxial valve consists of two cylindrical parts, an inner cylindrical part and an outer cylindrical part. The inner cylindrical part is called the spool shaft and the outer cylindrical part is called the spool sleeve. There is a gap between the spool shaft and the spool sleeve, through which the medium flows.

This report studies the global Coaxial Valve production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Coaxial Valve, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
