CCM (compact Camera Module) are employed with functionalities such as down sampling features and light sensing capabilities that enable the users to take pictures or as a video input device. With the development of Internet technology, the continuous improvement of network speed, coupled with the maturity of photographic imaging device technology and the large amount of use in the manufacture of cameras, has made its price drop to a level that ordinary people can bear. Now, compact camera module is widely used in mobile phones, PDAs and Tablet PCs. COB suggests the sensing unit chip will certainly be straight bonded to PCB (printed circuit card) or FPC (flexible printed circuit). COB process is part of the electronic camera module manufacturing process, therefore it's done by the cam component supplier.
