Abstracts

Cobalt-60 radiotherapy machine is a device widely used in the medical field, mainly used for tumor radiotherapy.

According to our (Global Info Research) latest study, the global Cobalt-60 Radiation Therapy Machine market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

The cobalt-60 radiotherapy machine mainly consists of a sealed cobalt-60 radioactive source, source container and protective head, shutter device, collimator, treatment frame, timer and motion control system, as well as radiation safety and interlocking system composed of other parts. During treatment, the cobalt source is pushed by a pneumatic mechanism to transport the radioactive source from the storage position to the irradiation position. The gamma-ray beam generated by cobalt-60 is emitted outward through the collimation port and irradiated at the tumor location to kill tumor cells. After the treatment process is completed, the cobalt source will actively return and park stably in the storage position.
