Abstracts

The global Cobalt 96-well Plates market size is expected to reach \$ 33.21 million by 2032, rising at a market growth of 8.3% CAGR during the forecast period (2026-2032).

Cobalt 96-Well Plates are preloaded 96-well laboratory consumables with cobalt ion chelating resin or cobalt-chelated surfaces, primarily used for parallel capture, purification, or immobilization of His-tagged recombinant proteins. These laboratory consumables typically have high added value, with an estimated gross margin of approximately 55%.

Cobalt 96-well plates belong to the niche high-throughput segment of His-tag protein purification consumables. The market size is significantly smaller than nickel NTA resins, magnetic beads, and standard pre-packed columns. Procurement is concentrated in university research, CROs, antibody and recombinant protein platforms, structural biology, and protein engineering laboratories, where customers focus on purity, consistency, single-well capacity, and compatibility with centrifuges, vacuum manifolds, or automated liquid handling platforms. Demand is mainly driven by recombinant protein expression screening, antigen preparation, protein-protein interaction assays, and small-scale process development. Compared with nickel systems, cobalt ion systems typically exhibit lower non-specific binding, making them suitable for scenarios requiring higher purity or smaller sample volumes. However, their binding capacity and versatility are relatively limited, so they are primarily used as high-purity screening tools rather than for large-scale preparative applications. The supply side is dominated by a few life science reagent and chromatography consumable companies, with limited SKUs, and some brands offer custom or on-demand pricing. Future growth will come from automated high-throughput laboratories, early-stage protein engineering screens, and outsourced biologics discovery services, with limiting

factors including alternative solutions, budget constraints for individual consumables, and the ability of users to plate bulk resins themselves.
