The global Cobalt Chromium Alloys market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Cobalt Chromium Alloys have high strength, high hardness, high elastic limit, high energy storage ratio, high fatigue strength, small elastic hysteresis and aftereffects, non-magnetic, good wear resistance, shock resistance and impact resistance, and excellent corrosion resistance. The above many advantages make cobalt-chromium alloy very suitable for making various instrument springs and other elastic components working below 400°. In recent years, there have been more and more cases of cobalt-chromium alloys being implanted in the human body in related medical products. In addition, cobalt-chromium alloys are currently used in industries including oil and gas extraction, medical, dental, aerospace, national defense, space exploration and luxury watches.
