The global Cobalt Free Cathode Materials market size is expected to reach \$ 19683 million by 2032, rising at a market growth of 12.3% CAGR during the forecast period (2026-2032).

Cobalt free cathode materials refer to cathode active materials for lithium ion secondary batteries that contain zero cobalt in their chemical composition, formulated to eliminate dependency on cobalt while maintaining high energy density, safety, cycle life, rate capability, and overall electrochemical performance. In 2025, global cobalt free cathode materials production reached approximately 1,408K ton, with an average global market price of around USD 6,000 per ton. A factory gross profit of USD 1,200 per ton with 20% gross margin. A single line full machine capacity production is around 1,500 ton per line per year. The upstream is dependent on lithium carbonate, iron phosphate and conductive carbon. The downstream demand is concentrated in EV batteries, energy storage systems and industrial batteries. LFP blade battery used in EV for longer life cycle life, safety and cost efficiency. China market is driven by dominant production and consumption in EV manufacturing and battery cell output. US market is driven by government incentives under the Inflation Reduction Act (IRA) and heavy investments from automotive companies.
