In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Cobalt molybdenum hydrotreating catalyst is cobalt molybdenum catalyst and the hydrogen will react with organic sulfides of hydrocarbon feedstock to occur hydrogenolysis, which is good for desulfuration and protecting catalyst from poisoning. Cobalt molybdenum hydrogenation method can not be independent desulfurization and it need to add zinc oxide, so as to produce desulfurization reaction. Cobalt-molybdenum hydrotreating-zinc oxide main principles are as follows: zinc oxide will react with sulfuretted hydrogen to produce zinc sulfide and water. Zinc oxide can also directly react with thiol to achieve desulfurization. Its main principles are to catalyze organic sulfur hydrogenation to produce inorganic sulfur, and then to use desulfurizer for desulfurization.

Co-Mo sulfur-tolerant catalyst is suitable used in fertilizer plants, methanol plants, refinery hydrogen plant for producing hydrogen, adding ammonia desulfurizer which uses natural gas, oil gas, refinery gas and naphtha as raw material for a variety of hydrocarbons, gas desulfurization.
