## Abstracts

The global Cocamide Monoisopropanolamine market size is expected to reach \$ 127 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

Cocamide Monoethanolamine is a non-ionic surfactant and thickening agent that significantly enhances foam stability, provides thickening properties, reduces irritation, and maintains product stability across a wide pH range. It is a more environmentally friendly and stable alternative to cocamide diethanolamine.

Its upstream production primarily relies on naturally sourced coconut oil or its derivatives (such as coconut fatty acid and methyl cocoate), as well as monoethanolamine (MIPA) synthesized through propylene amination.

Global sales are projected to reach approximately 20,000 tons in 2025, with an average market price of approximately US\$4530.6 per ton. The industry's gross profit margin is in the range of 15%-25%.

The mandatory shift towards sustainable raw materials by global daily chemical giants is a core driving force. On the one hand, increasingly stringent regulations on residual diethanolamine in personal care products are forcing formulators downstream to seek alternative solutions; on the other hand, cocamide monoisopropanolamine (MIPA) has a synergistic effect in improving formula viscosity and foam texture, significantly reducing the amount of other expensive surfactants needed, thus balancing product experience and overall cost.

In recent years, the maturation and large-scale production of monoisopropanolamine (MIPA) synthesis technology have also ensured its supply stability from the raw material end.

This report studies the global Cocamide Monoisopropanolamine production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Cocamide

Monoisopropanolamine and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
