Coconut juice, is the clear liquid inside coconuts (fruits of the coconut palm). In early development, it serves as a suspension for the endosperm of the coconut during the nuclear phase of development. As growth continues, the endosperm matures into its cellular phase and deposits into the rind of the coconut pulp. The liquid inside young coconuts is often preferred to the liquid of a ripened coconut.

Globally, consumers are becoming more health-conscious and seeking healthier products such as coconut juice, which is marketed as a dehydrator, a natural diuretic, a digestive soother, and a cholesterol-lowering effect.
