Abstracts

The global Cocoyl Chloride market size is expected to reach \$ 207 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Cocoyl chloride is a mixed fatty-acid chloride produced by replacing the carboxyl group of coconut fatty acids with an acyl chloride group. It is generally supplied as a colorless to pale-yellow reactive liquid and is primarily used as a key intermediate for cocoyl glycines, cocoyl glutamates, cocoyl sarcosinates, taurates, and other mild surfactants, as well as selected specialty additives, pharmaceutical intermediates, and agrochemical intermediates. In 2025, global Piezo PVDF Film sales reached approximately 44,000 tons, with an average price of 3.30 US\$/kg.

Penetration of sulfate-free, low-irritation, and amino-acid-based cleansing products in facial cleansers, shampoos, body washes, and baby care continues to support demand for cocoyl glycines, glutamates, sarcosinates, and taurates, increasing consumption of cocoyl chloride as an intermediate. Its coconut-derived feedstock supports plant-based and mild-cleansing positioning, while backward integration into acid-chloride production reduces transportation and hazardous-chemical handling costs for surfactant manufacturers. Coconut-oil price volatility, environmental and safety requirements for thionyl chloride, hydrolytic sensitivity, and extensive captive consumption mean that the merchant cocoyl chloride market grows more slowly than downstream amino-acid surfactant demand.

This report studies the global Cocoyl Chloride production, demand, key manufacturers, and key regions.
