According to our (Global Info Research) latest study, the global CoFeB Sputtering Target market size was valued at US\$ 1009 million in 2025 and is forecast to a readjusted size of US\$ 1870 million by 2032 with a CAGR of 9.2% during review period.

A CoFeB sputtering target is a functional thin-film deposition material composed of cobalt (Co), iron (Fe), and boron (B). It is used in physical vapor deposition (PVD), particularly magnetron sputtering processes, to deposit CoFeB thin films onto substrates. These films exhibit excellent magnetic properties such as high spin polarization, low coercivity, and strong perpendicular magnetic anisotropy, making them essential in advanced spintronic devices including magnetic tunnel junctions (MTJs), MRAM, and magnetic sensors. In 2025, global CoFeB sputtering target production reached approximately 136 MT, with an average global market price of around US\$ 7200 per kg. Annual production capacity is 154 MT. Gross Profit Margin: 38%. The CoFeB sputtering target industry chain is highly concentrated and technology-driven. Upstream consists of high-purity metal suppliers of cobalt, iron, and boron, along with advanced alloy processing equipment and vacuum metallurgy technologies. Midstream is dominated by precision manufacturers that perform alloy design, vacuum melting, HIP densification, machining, and bonding to produce finished sputtering targets. Downstream applications are primarily in MRAM, magnetic sensors, spintronic devices, and advanced semiconductor memory, where CoFeB is a critical functional thin-film material used in magnetic tunnel junction (MTJ) structures. CoFeB sputtering targets represent a high-value, performance-critical niche within advanced semiconductor materials rather than a commodity metal product. Their value is driven not by raw material cost but by composition precision, microstructural control, and process stability. As MRAM and spintronic technologies gradually scale, demand is expected to grow

steadily, but supply will likely remain concentrated among a few global players with strong metallurgical and semiconductor integration capabilities.
