## Abstracts

According to our (Global Info Research) latest study, the global Coffee Bag One-way Degassing Valves market size was valued at US\$ 177 million in 2025 and is forecast to a readjusted size of US\$ 229 million by 2032 with a CAGR of 3.9% during review period.

A Coffee Bag One-Way Degassing Valve is a small, specialized valve used in coffee packaging, designed to allow gaseous emissions, particularly carbon dioxide (CO<sub>2</sub>), to escape from sealed coffee bags without letting air or moisture enter. This valve is crucial for preserving the freshness and flavor of coffee, especially after the roasting process, as freshly roasted coffee continues to release CO<sub>2</sub> for several days. The valve enables safe gas release, preventing the bag from bursting due to gas buildup, while sealing in the coffee's aroma and flavor.

The valve works as a one-way system, allowing gas to exit the bag but not re-enter, maintaining an airtight seal. This functionality helps to extend the shelf life of the coffee by maintaining its freshness, ensuring that the coffee remains flavorful and aromatic until it is opened by the consumer.

The growing popularity of specialty coffee culture has led to increasingly stringent consumer demands for flavor freshness. The carbon dioxide continuously released from roasted coffee beans makes Coffee Bag One-way Degassing Valves a "flavor guardian" that locks in aroma and prevents bloating. From chain brands to independent roasters, they all use it as a standard packaging element to build a quality barrier. The dual waves of global coffee consumption upgrading and packaging technology innovation have injected strong growth momentum into Coffee Bag One-way Degassing Valves.

In 2024, global Coffee Bag One-way Degassing Valves reached approximately 5692.21 M Units, with an average global market price of around 30.24 USD per K Units.

The upstream raw materials for coffee bag one-way degassing valves mainly include PE, PP plastics, and silicone oil. Typical suppliers include Dow Chemical, Exxon Mobil Corporation, LyondellBasell, and SABIC. Downstream applications are primarily in the packaging of coffee beans and coffee powder, with typical customers including Dutch Coffee Pack, Best Coffeebags Design, Tedpack, Roastar, and HIBAGS Co., Ltd.

The single-line capacity of coffee bag one-way degassing valves depends heavily on the automation level of the production line, as well as the manufacturer's technical capabilities and equipment configuration. Daily capacity varies greatly, ranging from tens of thousands to hundreds of thousands of units, with industry gross margins ranging from 20% to 30%.
