Abstracts

The global Coffee Cup market size is expected to reach \$ 1856 million by 2032, rising at a market growth of 2.7% CAGR during the forecast period (2026-2032).

A coffee cup is a container that coffee and espresso-based drinks are served in. Coffee cups are typically made of glazed ceramic, and have a single handle for portability while the beverage is hot. Ceramic construction allows a beverage to be drunk while hot, providing insulation to the beverage, and quickly washed with cold water without fear of breakage, compared to typical glassware.

A coffee cup may also be a disposable cup in which hot beverages, including coffee, can be contained. Disposable coffee cups may be made out of paper or styrofoam. At coffee shops, paper cups are commonly used to give beverages to customers on the go, usually with a coffee cup sleeve to provide insulation against heat transferred through the container.

Some coffee cups are served with a small coffee spoon.

Global Coffee Cup key players include Dixie, Hefty, Snapcups, Chinet, etc. Global top four manufacturers hold a share about 25%.

North America is the largest market, with a share about 10%, followed by UK, and France, both have a share about 15 percent.

In terms of product, 16oz is the largest segment, with a share over 10%. And in terms of application, the largest application is Hot coffee, followed by Cold coffee.
