Abstracts

The global Coffee Nitro Infuser market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A nitrogen infuser is a device used to infuse liquids with nitrogen gas. It is commonly used in the food and beverage industry to create nitrogen-infused drinks, also known as nitrogenated or nitro drinks. Nitrogen-infused beverages have become increasingly popular in recent years due to their unique texture, taste, and appearance.

The process of nitrogen infusion involves dissolving nitrogen gas into the liquid, typically a beverage, under high pressure. This results in the formation of tiny nitrogen bubbles in the liquid, similar to the bubbles in carbonated drinks. However, nitrogen bubbles are smaller and create a creamy and velvety texture in the drink, rather than the carbonation 'fizz' seen in traditional carbonated beverages.

The nitrogen infuser typically consists of a pressure vessel or chamber where the liquid is infused with nitrogen gas. The device may include a nozzle or dispenser through which the nitrogen-infused liquid is served.
