Abstracts

Coffee valves also called as freshness valves, aroma valves or one-way degassing valves. They are designed to allow pressure to be released from an airtight package while not allowing external atmosphere (i.e. air with 20.9% O₂) to enter the package, which are critical in preserving the coffee from losing its aroma or freshness. These are proved to be the best for degassing of CO₂ while not letting the oxygen, moisture or any contaminants to enter in bulk bags or pouches.
