According to our (Global Info Research) latest study, the global Cognitive & Artificial Intelligence Systems market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Artificial intelligence has received an overwhelming attention globally due to the extraordinary developments it has brought about in the recent past such as mobile phones using speech recognition, driverless cars, robots automating operations in factory, and many others. Technologies such deep learning, machine learning, speech recognition, image recognition, and automated reasoning, among others, are designed to provide computers that are capable of mimicking human abilities are an integral part of cognitive/artificial intelligence systems. Moreover, cognitive/artificial intelligence systems are widely used by the industrial sector wherein robotics developed on the artificial Intelligence technology is deployed in the workstation in order to automate the production processes, as well as are used in building and home automation, among others. The artificial Intelligence technology has also led to development of advanced drones used for surveillance in the aerospace and defence industry.

As an important force driving a new round of scientific and technological revolution, artificial intelligence has been of national strategic importance. Many governments introduces polices and increase capital investment to support AI companies. The Digital Europe plan adopted by the European Union will allocate ?9.2 billion on high-tech investments, such as supercomputing, artificial intelligence, and network security. In order to maintain its leading position, the United States will increase its investment in artificial intelligence research and development in non-defense fields, from US$1.6 billion to US$1.7 billion in 2022. According to the latest data released by IDC, global
